

Mission Statement

“The OPBG is enhancing the Otago Peninsula’s natural environment for people and our indigenous wildlife. Through partnerships that enable the community to participate and deliver co-ordinated peninsula-wide pest control and biodiversity enhancing projects we are restoring the resilience of ecosystems and providing a healthy quality of life for all.”

Working Objectives

The Trust will, in partnership with the Otago Peninsula community:

work to enhance the biodiversity of the Otago Peninsula

consult with Otago Peninsula residents and organisations

plan and implement pest eradication and control projects in partnership with landowners

use technologies that are friendly to people and pets, and do not harm non-target species

promote knowledge and interest in biodiversity on the Otago Peninsula by meetings and publications of an educational nature

facilitate community participation and encourage local ownership of each project

monitor projects to ensure their effectiveness.

The Strategic Plan developed by trustees in 2013 outlines the direction for the next 5 years. A summarised Strategic Plan is on the web site, see REPORTS.

The OPBG welcomes your feedback.
